

# At Feathers End

*A Birds Trust Must Be Earned*

## Nest Box Information For Linnies

**10" x 7" x 12", Hole: 2" Diameter**

The box is taller in the front/or back, depending on whether it is an outside mount or inside mount. It does not have to be taller it is just easier to work with. The front, where the hole is, is 12 inches tall. The diameter of the hole is 2 inches. The bottom does not have to be dished but it is nice. The end where the hole is should have a 2x4 in it to keep the nesting material and babies at one end of the box. Those are ventilation holes at the top.

Please remember that the ideas and **nest boxes shown here (click) are what has worked for me.** Other breeders have had wonderful success with other types of material and types of nest boxes. There is no one way or formula for success.

**Box With Hole**  
Linnie Nest Box With Hole. The dip or hole is not necessary but it helps.

Box is Near 7 Inches Across

Box is 10 " Wide  
The hole is 2 inches Wide, Small Holes  
Can Ventilate Boxes

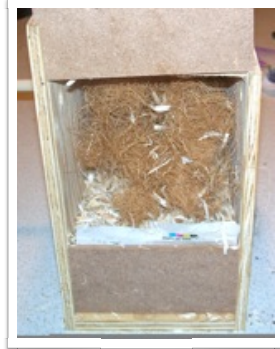

Box is 12 " Tall

Then Line Box With Aspen Shavings

for ventilation Purposes

Finally, Line Box With Coco Fiber

Line Box With Paper
